1. Claims 7-9 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected inventions and/or species, there being no allowable generic or linking claim. Election was made without traverse in Paper No. 9.
2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

3. (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
4. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being fully anticipated by Coberly et al.

Element 26 of Figure 4 is a blade signal line. The specification of Coberly et al says at column 2, lines 65 plus that two sheets of Mylar 32 and 34 are pressed together so that element 26 is in a groove. Elements 32 and 34 form a support insulator. There appears to be an error in Coberly et al in that the numeral 32 does not appear in the drawings but as described it would be the element to which the line from numeral 16 extends. Elements 36 and 38 are a plurality of guard patterns for electromagnetically shielding the line 26. Looking at Figure 8 and Figure 4, element 22 is supported by the support insulator. With regard to claim 2, Figure 4 shows at least a part of the probe 22 to be covered by insulating material, namely the back side of element 22. With regard to claims 3, 4 and 5 element 30 of Figure 4 is a connector. With regard to claim 6 Figures 1 and 2 show the connecting needle connected to a probe card via a coaxial cable 60.
